

NORPPAPOLKU (THE SAIMAA SEAL TRAIL)

- Total length 13 km
- Marked on the terrain in 2016
- Kitulanlenkki 3 km
- Kaivannonkieppi 4 km
- Kotkatsaarenkierros 3 km
- Location: Puumala

Wellbeing from nature – exercise until you are out of breath, or take a moment to breathe in the surroundings and enjoy the experiences along the Saimaa Seal trail on your own or with good company

The Saimaa Seal Trail

The Saimaa Seal trail showcases Lake Saimaa and its spectacular geological sights in depth. The trail takes you along great forest hiking routes, to observation points where you can rest, and to spots where you can dive into Saimaa's inviting waters. If you are lucky, you might catch a glimpse of one of the rarest seals in the world, the Saimaa ringed seal, after which the Saimaa Seal trail is named.

The Saimaa Seal trail is 13km long in total, and can be walked in either direction. You can choose from three shorter circular routes, if you don't wish to walk the entire trail. The routes are signposted with information. The Saimaa Seal trail runs through rugged forest, rocky, lakeland and heathy terrain. The trail varies from fir needle-lined paths to rocky surfaces. The Saimaa Seal trail is suitable for recreational use all year round. During the winter, please be aware of the snowmobile route that runs past the Kitulanlenkki area.

The Norppapolku trail consists of three circular routes: Kitulanlenkki, Kaivannonkieppi and Kotkatsaarenkierros. The recommended starting points are the centre of Puumala, the Luukolantie car park, and the Kaivanto car park. The Saimaa Seal trail's routes are great for hiking and jogging, nature spotting, snowshoeing, mountain biking, and geocaching. There are also swimming areas at Kaivannonkieppi and along the Kotkatsaarenkierros.

Geological sights along the Saimaa Seal trail:

DRUMLINS

Drumlins are elongated moraine formations formed by the flow of an ice sheet. They often have a rocky core, behind which a long ridge of moraine accumulates. Drumlins are usually very large, and are therefore difficult to discern in the terrain, but there is a small drumlin ridge along the Kitulanlenkki path on the Saimaa Seal trail that is almost immediately discernible.

TYPES OF ROCK IN THE AREA, AND THE VIEW FROM THE OBSERVATION POINT

The observation point at Pääskytvuori provides excellent views of Lake Saimaa, but visitors should also take a look down at the solid bedrock under their feet. The type of rock at the observation point is striped mica gneiss, which formed millions of years ago from sand and clay on the ancient seabed. These ancient sediments were transformed into mica gneiss through mountain folding, deep in the Earth's crust.

KETTLE

Kettles formed as large blocks of ice were buried in the sand and gravel at eskers and deltas formed by glacial rivers. As the ice blocks gradually melted away, holes of various shapes and sizes were left behind. The esker terrain around the Saimaa Seal trail is dotted by many kettles, and one kettle pond lies along the Kotkatsaarenkierros.

ANCIENT SHORELINES

There are beach banks, terraces and ridges at various elevations on the slopes of the esker terrain around the Saimaa Seal trail, such as along the Kotkatsaarenkierros. They are the ancient shorelines that formed in the ancient phases of Lake Saimaa, when the surface of the water was higher. They were revealed due to land uplift and a fall in water levels. The latest 2-3-metre drop in water levels took place when the Vuoksi outlet channel formed around 5,700 years ago.

LONGITUDINAL ESKERS

Eskers formed in long, narrow stretches in glacial river tunnels. The eskers comprise material that was layered and accumulated by meltwater that flowed through network of tunnels in the ice sheet. The core of the esker is made up of coarse gravel and rocks worn round by the meltwater. Finer sand accumulated over and around the core. The Kotkatsaarenkierros crosses over the esker ridge to the south of Maijavuori.

Saimaa Geopark

Geology is a rising trend in nature tourism. Geoparks are internationally highly popular tourism operating models. The aim of the Geoparks is to achieve sustainable economic development in these areas with the help of geotourism. From the tourist attraction perspective, geoparks are similar to national parks and UNESCO World Heritage Sites, although a geopark is not a nature reserve as such. Saimaa Geopark consists of 9 municipalities: Sulkava, Ruokolampi, Juva, Savitaipale, Taipalsaari, Puumala, Lappeenranta, Imatra and Mikkeli. There are 14 geosites and 3 nature and culture sites in Puumala.

Saimaa ringed seal

The Saimaa ringed seal (*Pusa hispida saimensis*) is one of the rarest seals in the world. Saimaa ringed seals live only in Finland. It is estimated that there are currently about 400 of them. The Saimaa ringed seal is one of the few seals to live in fresh waters. It was isolated in Saimaa about 8,000 years ago when the connection to the Baltic Sea was severed after the Ice Age. The Saimaa ringed seal has larger eyes and brain than its relatives, because it had to adjust to living in the dark and labyrinthine waters of Saimaa. The typical Saimaa ringed seal is: 130–145 cm long; weight: 50-90 kg; colour: dark grey with individual light rings on the fur; average lifespan: 20 years.

Respecting nature while hiking in Saimaa

- You can move around the area freely in accordance with Everyman's right.
- It is only permitted to light a fire in designated areas. It is prohibited to light open fires during terrain or forest fire alerts.
- If you intend to stay overnight for 1–2 days, please use the marked rest areas or designated camping areas.
- Do not litter. Burnable waste can be burnt in campfires, and bio-waste can be composted along with WC waste. Please take any other waste with you when you leave.
- You can pick berries, mushrooms and non-protected plants.
- Angling and ice fishing are permitted by Everyman's right. The relevant permits are required for other types of fishing.
- Pets must be kept on the lead.
- Stay on the trails and paths, and respect other trail uses.

EMERGENCY NUMBER 112
– KNOW YOUR LOCATION.

Norppapolku

The Saimaa Seal Trail

visitpuumala.fi
saimaageopark.fi

Norppapolku is one of the geosites in the Saimaa Geopark. Geological sights along the trail:

1. Drumlins
2. Types of rocks in the area
3. Kettle holes
4. Ancient shorelines
5. Longitudinal eskers

- Norppapolku
- Kitulanlenkki
- Kaivannonkieppi
- Kotkatsaarenkierros

NORPPAPOLKU 13 km (solid blue line) consists of three looped routes. The markings for these are blue dots painted on the trees. Preferred starting points are the centre of Puumala, Luukkolantie carpark and Kaivanto carpark. Route class: moderate.

KITULANLENKKI 3 km (yellow dashed line) hiking, trail running, nature observing, snow shoeing, mountain biking and geocaching. The markings for this are yellow dots painted on the trees. Route class: moderate.

KAIVANNONKIEPPI 4 km (red dashed line) hiking, trail running, nature observing, snow shoeing, swimming and geocaching. The markings for this are red dots painted on the trees. Route class: moderate.

KOTKATSAARENKIERROS 3 km (white dashed line) hiking, trail running, nature observing, mountain biking, swimming and geocaching. The markings for this are white dots painted on the trees. Route class: easy.

- Info
- Carpark
- Camp fire site
- Swimming
- Spring / well
- Dry toilet
- Jetty/Moorings
- Lookout
